

Callaham Cross Reference

This is not a complete guide as to which Callaham components will fit your guitar but it does give a starting point and some examples.

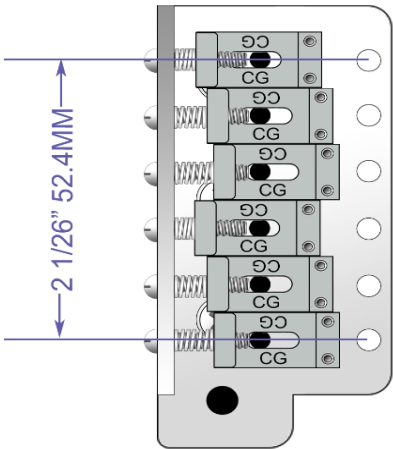

The most important measurements are the screw mount spacing, the string spacing and to ensure that your body is 44.5mm thick.

Guitars with non-Fender bridges can have different spacings so you must check the mount spacing and how the strings will sit on your neck.

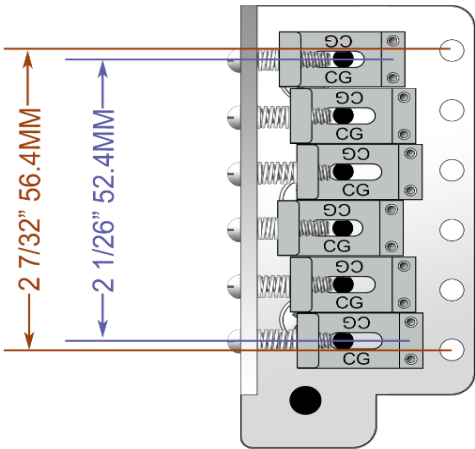

If you are unsure please contact us with photos and exact measurements of your guitar.
